SpawGlass ladies are treated to a special Women in Construction Week lunch at the San Antonio office.

SpawGlass Celebrates Women in Construction

The month of March brought the observance of Women's History Month, International Women's Day and Women in Construction Week.

At SpawGlass, we celebrated the extraordinary women who work diligently to accomplish our mission of providing the absolute best construction experience. Recognizing their achievements isn't limited to one day, week or month per year, however, it's a year-round commitment that we strive to practice each day.

Female team members fill nearly every type of role at SpawGlass, both onsite and working behind-the-scenes in our office locations, and approximately 64 percent of women at SpawGlass are employee owners. Pursuing a career in a vastly male-dominated field requires passion – one of SpawGlass' core values – and dedication to contributing to the success of our company.

"Working in the construction industry, I am extremely proud of the product that we are able to hand off to our clients," said Houston Division Superintendent **Luba Dub**. "I think fixing things, building things, making things better is my passion; it's always been my passion."

One way teams can benefit by including female members is by recognizing and utilizing their unique strengths. Division Controller **Beth Farner** finds that certain skills can be useful when navigating the demands of the construction industry. "One of the benefits of having women working in the construction industry is our innate ability to multi-task,"

Assistant Project Managers Angela Vasquez and Madelyn Reininger bring valuable experience and leadership to their teams.

Beth observed. "There will be plenty of opportunities that will need someone who can juggle competing priorities and who will be able to accomplish multiple deadlines."

While women currently only comprise 14 percent of construction professionals in the United States, that number is higher than ever, and growing. Houston Division Project Manager **Clare Wilmore** observed that the number of women in leadership roles is also increasing, which will require the industry to adapt. "I feel like it's still new, like we're the first generation of female project managers and superintendents, and it's nice to see representation on the jobsite," said Clare, adding: "I would like to get to the point where it isn't a big deal to be a woman in construction, where it's more of the norm."

A Note from Joel

Our people come from all walks of life, and our passion for our people includes helping every team member be the best version of themselves — from great construction professionals to great leaders and great people in our world. This is how “SpawGlass Builds” a better world, community and industry. As featured in our cover article, women are a vital part of our business. This is not a new concept for SpawGlass; it’s in our roots.

In 1954, our second year in business, Hortense Dyer joined SpawGlass as a bookkeeper. She was an early investor and helped SpawGlass grow our bonding capacity. In the 1960s, Hortense transitioned from being a bookkeeper to one of the first female estimators in the industry. Hortense was later named president of MEDIX, a wholly owned subsidiary of SpawGlass, and headed up a Design/Development Division. She also served as vice president and secretary of the SpawGlass board. As evidenced by her career path, Hortense played a huge role in SpawGlass’ early years and had great insight into the early workings of SpawGlass and the teamwork of the original leadership team. For more information, be sure to read our book “The SpawGlass Way.”

While we honor women in construction in this edition of our newsletter, I hope you see there is more to be learned from the story of Hortense. She was someone who wasn’t afraid to take on a new challenge. She never stopped growing as a person. Her passion for SpawGlass never wavered. While SpawGlass has many stories similar to Hortense’s, we can’t wait to watch as new leaders evolve in SpawGlass to step up to the challenges needed to take our company into the future.

Thank you for embracing our future.

Una Nota de Joel

Joel Stone, Chairman/CEO

Nuestra gente proviene de todos los alrededores de la vida, y nuestra pasión por nuestra gente incluye ayudar a cada miembro del equipo a ser la mejor versión de sí mismos, desde grandes profesionales de la construcción hasta grandes líderes y grandes personas en nuestro mundo. Así es como “SpawGlass construye” un mundo, una comunidad y una industria mejores. Como se muestra en nuestro artículo de portada, las mujeres son una parte vital de nuestro negocio. Este no es un concepto nuevo para SpawGlass; está en nuestras raíces.

En 1954, segundo año en el negocio, Hortense Dyer se unió a SpawGlass como contable. Fue una de las primeras inversionistas y ayudó a SpawGlass a aumentar nuestra capacidad de vinculación. En la década de 1960, Hortense pasó de ser contadora a una de las primeras mujeres tasadoras de la industria. Más tarde, Hortense fue nombrada presidenta de MEDIX, una subsidiaria de propiedad total de SpawGlass, y encabezó una División de Diseño/Desarrollo. También se desempeñó como vicepresidenta y secretaria de la junta de SpawGlass. Como lo demuestra su trayectoria profesional, Hortense desempeñó un papel muy importante en los primeros años de SpawGlass y tuvo una gran visión de los primeros trabajos de SpawGlass y el trabajo en equipo del equipo de liderazgo original. Para obtener más información, asegúrese de leer nuestro libro “The SpawGlass Way”.

Si bien honramos a las mujeres en la construcción en esta edición de nuestro boletín, espero que vea que hay más que aprender de la historia de Hortense. Ella era alguien que no tenía miedo de asumir un nuevo desafío. Nunca dejó de crecer como persona. Su pasión por SpawGlass nunca flaqueó. Si bien SpawGlass tiene muchas historias similares a la de Hortense, estamos ansiosos por ver cómo evolucionan nuevos líderes en SpawGlass para enfrentar los desafíos necesarios para llevar a nuestra empresa hacia el futuro.

Gracias por abrazar nuestro futuro. ■

Awards & Honors

- **Eagle Award:** North Park Lexus of San Antonio Renovation and Service Bay Expansion (Commercial: \$5 to \$10 Million); **West Pearland Library** (Institutional: \$10 to \$25 Million) – Associated Builders and Contractors (ABC) National Excellence in Construction (EIC) Awards.

Charlie Richardson and Ryan Chavez accept the ABC National Eagle Award for the North Park Lexus of San Antonio project.

Cameron Shewmaker and Roger Berry accept the ABC National Eagle Award for West Pearland Library.

- **Outstanding Construction Award – Austin Convention Center Marshalling Yard and Warehouse** – Associated General Contractors (AGC) Austin Chapter.

David Paden, Thomas Duvall (DAVCAR), Cris Ruebush (PGAL), Ryan Syring, Cami Alling and Klay Pavliceck (PGAL) receive the AGC Outstanding Construction Award for the Austin Convention Center Marshalling Yard and Warehouse.

- **Project Superintendent of the Year Award:** Charlie Richardson; **Project of the Year Between \$5-\$10 Million Award:** North Park Lexus of San Antonio Renovation and Service Bay Expansion; **General Contractor of the Year Award:** SpawGlass – American Subcontractors Association (ASA) San Antonio Chapter.

VISION • MISSION • WAY

Spirit Awards

This award highlights five nominations that best exemplify each of the core values.

Build Trust – Chris Schubnell and Jeff Eubank (A). In preparation for an upcoming project, our client requested we visit one of their similar facilities in Arkansas. On the day of departure, a winter weather advisory was issued for Central Texas. Flights were being cancelled, and it looked like there was no way to make the trip. The client was already there and would rather extend his stay instead of rescheduling this very necessary visit. Recognizing the importance, and because there were no flights out of Austin, Chris and Jeff drove to Houston, where they were able to catch a flight to Arkansas and avoid keeping the client waiting.

Be Professional – Luis Fernandez (SA). In the last 30 days, Luis has experienced two unexpected and uncommon events at his project. The first was an OSHA inspection in which Luis followed the SpawGlass OSHA inspection process with perfect precision: he notified the project team quickly, treated OSHA with respect and managed the visit professionally. The second event happened when a subcontractor laborer suffered a seizure while onsite at Luis's project. Within seconds, Luis responded by locating a defibrillator, contacting emergency services, securing the area and notifying the leadership team. It takes confidence and expertise to manage an intense medical emergency on a project.

Charlie Richardson is named Project Superintendent of the Year by the ASA San Antonio Chapter.

Live Teamwork – Roland Gloria, Francisco Gongora, Abelardo Moncada Reyes and Noe Martinez (C). Our team recently received rave reviews from Alamo Colleges Northeast Lakeview Campus for their work on the Moisture Barrier project. Our client noted **Roland's** strong commitment to excellence and his helpfulness in answering questions and keeping everyone informed to keep the project moving forward. **Francisco** operated all of the heavy equipment onsite with great ease and a great attitude while working safely and efficiently, helping to complete the project without having to close the Student Services building or the campus. **Abelardo** was onsite every day working diligently, with a friendly greeting to anyone visiting the site. **Noe** started each day with a friendly smile and was always willing to assist with everything from working "in the trenches" to coordinating schedules.

Be Passionate – Scott Lewandowski and Jared Short (C). Scott and Jared were preparing for freezing weather on a jobsite in Houston. After completing preparations on the project building, they noticed neighboring tenants had not protected their hose bibs. Using the extra material they had on-hand, they took the initiative to help out their neighbors to make sure they were protected. The property manager and landlord both reached out to our client, commending the efforts of Scott and Jared.

Think Like an Owner – Ever Gamboa (SA). It had been raining for several days at one of our retail jobsites, and the site was surrounded by mud. Ever took it upon himself to arrive at the site at 4:00 every morning to run a sweeper to make sure our client's business remained clean for staff and customers during the day. Even when Ever was called away to help at another jobsite, he still made sure everything was clean at the retail site before the day's operations began. ■

Austin ladies celebrate Women in Construction Week with a special lunch.

SpawGlass Builds...Communities

Owner: Texas State Aquarium
Architect: Turner | Ramirez Architects

The Port of Corpus Christi Center for Wildlife Rescue at Texas State Aquarium

Since it first opened its doors in 1990, Texas State Aquarium has been dedicated to the rescue and rehabilitation of Coastal Bend wildlife, with founders envisioning a future state-of-the-art facility designed to house and care for rescued animals. Thanks to the SpawGlass-South Texas team, that vision has now been realized with the opening of the Port of Corpus Christi Center for Wildlife Rescue.

After Winter Storm Uri decimated native wildlife and brought in thousands of animals needing rescue in early 2021, the need to expand rescue capabilities was more urgent than ever before. The SpawGlass team worked with Turner | Ramirez Architects to create a structure that would stand up to harsh coastal conditions while serving as an environmental crisis center, medical treatment facility and research lab. Though this project posed unique challenges due to its intricately designed structure and location, the team was able to finish on time and within budget.

Overlooking the Gulf of Mexico in Corpus Christi, the building structure includes 15-foot-high columns and operational rooms that house backup generators and other emergency equipment that will protect the building and allow it to withstand

category 5 hurricanes and loss of power. Specialized waterproofing techniques and storm-preparedness safety measures were key elements of this project, along with obstacles unique to the harsh conditions at the coast. The facility's interior pools use pumps to bring in seawater, which is highly corrosive and requires special equipment and handling. Digging holes on the shoreline would ultimately lead to tidal pools, so the team utilized dewatering systems to mitigate tide conditions to avoid safety risks and delays. Despite these hurdles, Superintendent **Bobby Miller** found the project to be exciting and rewarding. "Through the challenges, it was motivating to build something that was unique to the region and to SpawGlass," remarked Bobby.

This innovative structure is the largest wildlife rescue center in the state of Texas and one of the largest in the country, with the capacity to house more than 1,000 animals at once and treat an assortment of species. Large animals such as dolphins, sharks and manatees can be

crane-lifted into the main pool, which holds 90,000 gallons. The main holding area includes a roll-up bay door and is surrounded by windows that let in plenty of natural light to allow the animals to maintain a natural sleep and wake schedule. In lieu of patient beds, the hospital ward is outfitted with rows of individual pools for treating sea turtles. Other interior features include research areas, an aviary, an exam room with the state's only wildlife CT scanner, a testing laboratory and a surgical procedure room with viewing windows for public observation.

The Port of Corpus Christi Center for Wildlife Rescue will also serve to enrich community education by inviting the public in to learn and observe. "The facility may inspire the next Jacques Cousteau," said South Texas Division President **Eric Kennedy**. This project is just one of many examples of how SpawGlass is dedicated to building communities — for the people, and for the animals. ■

SpawGlass Celebrates Women in Construction

SpawGlass is proactively aiming to encourage more females to join – and stay – in the construction industry through our SpawGlass Women in Construction (SGWIC) initiative. Through SGWIC, guest speakers have led discussions about career advancement, life balance and other relevant issues. By continuing these conversations and representing the SpawGlass Way through equity and inclusivity, our SpawGlass ladies are forging a path for themselves as well as future generations. ■

Owner: The University of Texas System
Civil Engineer: Martinez Moore Engineers

The University of Texas at Austin Red River Street Realignment

As construction manager-at-risk, SpawGlass teamed up with Martinez Moore Engineers and The University of Texas at Austin, in close coordination with the City of Austin, to realign a roadway that runs through a vital part of the UT Austin campus.

Formerly skirting around the campus, the new Red River Street route now runs a straight path alongside the new Moody Center Arena, between Martin Luther King Jr. Boulevard and Dean Keeton Street. The Moody Center Arena replaced the Frank Erwin Center and hosts live music events, shows and the University's women's and men's basketball games. The new roadway covers 15 city blocks, providing direct access to the Center and surrounding facilities and improving the flow of traffic through an intersection bustling with activity. Crucial steps of this project included constructing storm water quality features, installing miles of utilities, and creating bicycle lanes and pedestrian walks. Aesthetic elements such as upgraded lighting and landscaping were installed to add a clean and modern look to the roadway.

The Red River Street Realignment project was carefully coordinated with neighboring construction projects that were also underway, including the completion of the arena itself, which required exhibiting an extraordinary level

of communication with all involved parties. The team went above and beyond to build trust and ensure that the University and all stakeholders were considered and accommodated, going so far as to complete sections months ahead of schedule to avoid construction congestion during football season in front of the stadium.

Also posing a challenge were the decades-old existing utility lines in the most heavily congested area of the campus, which proved to be equal parts problem and learning opportunity. Outdated installation standards necessitated the adoption of a site-specific line strike prevention plan, which meant living teamwork by calling on the experience and knowledge of other team members within SpawGlass. After implementing the plan, the team was able to celebrate a successful project completion with far fewer obstacles. Superintendent **Harrison Holley** stated, "It was an incredibly difficult challenge, but our team worked together to rise above and is better because of it."

Contributing to the success of this project was the outstanding work done by COE Concepts, our protégé partner through the UT System Mentor Protégé Program agreement. COE Concepts, a minority-owned/women-owned business enterprise (MBE/WBE), provided essential turnkey services such as barriers and traffic control, which enabled us to perform our work effectively.

A noteworthy achievement, late in 2022, the project team received the UT System Diamond Safety Through Exemplary Performance (STEP) Award, recognizing the team's efforts and commitment to keeping everyone safe.

Overall, this project was a shining example of our team members going above and beyond and practicing each of our core values every step of the way. "We shaped our execution of the project to accommodate the needs of the owner and stakeholders to the best of our ability," said Harrison. "In doing so, we believe we provided the absolute best construction experience." ■

Healthcare Highlight

CHRISTUS Spohn Health System

SpawGlass-South Texas has been hard at work on multiple CHRISTUS Spohn projects in Corpus Christi. Goals of the projects range from adding square footage to increase services and capabilities for thousands of patients across the region to updating existing facilities to ensure optimal operational capability.

Project Manager **Jeff Vandercook** and Superintendent **Ross Rodgers** are leading a 30,000-square-foot tenant finish-out at CHRISTUS Spohn Hospital Corpus Christi - South to provide the hospital with a new neonatal critical care unit (NCCU) and intensive care unit (ICU). The existing central utility plant has been updated and modified to increase its capacity to support the new NCCU and ICU.

At the same hospital, Project Manager **Jared Hobbs** and Superintendent **Colt Horvath** are tackling the Emergency Department Expansion

and Renovation project to provide expanded patient intake, screening, trauma, treatment, isolation rooms and unit support spaces. This project will also create an easily identifiable

public entrance from the exterior and create a third bay for ambulance parking.

At CHRISTUS Spohn Hospital Corpus Christi - Shoreline, Project Managers **Joey Arriola** and **Raul Lopez** and Superintendent **Ben Horton** took on two projects: the Central Sterile Room (CSR) equipment replacement project, which includes a renovation of the hospital's sterilization department, and replacement of the heating

water system for the second level surgery department. This was a very complicated renovation that presented challenges for the team in order to keep the hospital fully functional throughout construction." ■
